

# BASIC CLINICAL RESEARCH COURSE

Join us for a 2-day workshop developed and led by leading ICU researchers.

**This workshop will introduce you to key concepts in clinical research, including:**

- Reviewing the literature
- Designing a study
- Writing a research protocol
- Ethical aspects of clinical research
- Statistics
- Data management

This course is designed for early-career, multidisciplinary researchers interested in clinical research – with particular focus on ICU. As with all BASIC courses, the emphasis is on practical application rather than theoretical knowledge. It is ideal for registrars planning a formal project or junior consultants aiming to incorporate research into their non-clinical portfolio. The workshop is also suitable for nurses and allied health professionals beginning a career in research.

The workshop will consist mainly of small group discussions on individual topics. Participants are expected to read the provided manual before attending. We encourage you to bring a research idea to the workshop, which can be workshopped with the faculty.

## Date

**Thursday 28 –  
Friday 29 August 2025**

(catering provided for both days)

## Venue

**College of Intensive  
Care Medicine, Suite  
201, 2 Porter Street,  
Prahran VIC 3181**
